Ms. Klawinsky’s awesome Advanced Academic students created a magical amusement park, Sir Isaac’s Inertialand. The rides in this park were based on Newton’s Laws of Motion. Students started by creating a preliminary design of their ride. Following design approval, each team completed written and pictorial evidence of ride safety and they created a newspaper ad designed for the target audience of the ride. The culminating activity was the presentation by each design team of the thrill ride.

Everyone that attended Sir Isaac’s Inertialand was dazzled and amazed!
